

Inverted spiral

Use rings with an AR of around 4.5. Using two different colours is recommended for learning the weave. These instructions show a clockwise spiral. For anti-clockwise tilt each ring in the opposite direction.

1. Make two pairs of one gold and one silver linked rings.

2. Put one pair on top of the other.

3. Link the two gold rings together and the two silver rings together with copper rings. You could use a marker ring to hold the two copper rings together and mark the start of the chain.

4. Add a silver ring through the two silver rings and a gold ring through the two gold rings.

5. Add a gold ring through the new silver ring and the outside gold ring from the original pair. (Notice that from this side of the chain, one gold ring of the original pair is sandwiched between the two original silver rings and the other one isn't. It is the latter ring that I am referring to as the “outside” ring).

6. Add a silver ring through the gold ring from step 4 and the outside silver ring of the original pair.

7. Link the latest two silver rings with a new silver ring and the latest gold rings with a new gold ring. This is essentially the same as step 4.
8. Repeat steps 5, 6 and 7 for the required length.
