

Pheasible

An AR of about 3 works very well, but other ARs can also be used. Pheasible chain is made up of units of 10 rings.

1. Start with a 2-2-2-2 chain of 8 rings.

2. Take one ring from each end pair of rings and add a new ring (shown in gold) through these rings. Note that there is a choice of orientation here, you can either take rings A and B or rings A and C to add the new ring through. Here I have used rings A and B. It does not matter if you mix the two choices in a chain.

3. Now connect the other two outside rings with a new ring.

That's all there is to it. Just add more units, connecting them by the (gold) rings.
